

## Robert Slovak Professional Background and Accomplishments

Robert Slovak is a degreed Mechanical and Aeronautical & Astronautical engineer best known as the co-founder of Water Factory Systems in the early 1970's. He and his brother were among the early developers of applying Reverse Osmosis (RO) technology, one of the world's leading water treatment discoveries. Their successful innovations encompassed home and office RO drinking water systems, bottled water production, laboratory purification, hemodialysis, seawater desalination, microchip production, bottled water production, water vending, spot-free vehicle washing and scores more.

As a result of the rapid growth of RO application, Robert's ongoing seminars and a best-selling industry book on the subject of POU RO, he became a well-known figure in the water industry. In 1989 Water Factory Systems was purchased by the Cuno Inc., a world-class leader in fluid treatment. Since then, it was acquired by the 3M Corporation, which continues to market many of these original products.

Robert officially retired from the US water industry in 1996 and went on to bring his knowledge and experience to Brazil and other international markets. He put together a team and published *Agualatinomerica* magazine to establish a legitimate water equipment and education infrastructure in Brazil. His "students" continue to play a major role in Brazil's water industry.

In 2004, while in a remote location of Brazil, Robert became seriously ill and was introduced to a little-known 115 year-old medical discovery known as *Original Quinton Marine Plasma* (after the famous revolutionary biologist René Quinton). This little-known ocean-harvested nutraceutical is still being produced and used by leading-edge medical practitioners worldwide. Having been an avid student of health and nutrition science for decades, Robert recognized the remarkable history of this product in supporting a wide range of the most difficult health conditions. He and his team now import *Original Quinton* products for distribution to health practitioners of all disciplines throughout North America. It is also available to health-seeking consumers under the name *QuintEssential*.

While attending medical and wellness conferences throughout North America, Robert recognized the minefield of water-related misinformation encountered by doctors and patients alike. This unsettling experience soon turned into the motivation to do something about it and *Purative Inc.* was established. A team with more than 150 years of combined experience was assembled to create a product line of Point of Use (POU) and Point of Entry (POE) water purification systems for health and wellness minded consumers. In addition, a line of advanced water additives was developed to properly mineralize drinking water and provide effective alkalizing of the fluids and tissues.

For the past five years Roberts focus has been on bringing a new medical breakthrough called "Molecular Hydrogen" (H<sub>2</sub>) to the medical profession and health-minded consumers. This smallest molecule in the Universe has been overlooked as a nutrient and nutraceutical until now, but medical and health researchers and clinicians are acclaiming Molecular Hydrogen as the most potent and unique antioxidant. Robert and his team have

helped develop a practical way for everyone to benefit from this discovery by creating a simple tablet that reacts with water to infuse it with Molecular Hydrogen.

Most recently, Robert was a featured speaker at a recent International Water Conference sponsored by Aquatech and Water Quality Association. There he drew a record crowd to his technical presentation on the popular but controversial subject of alkaline and antioxidant water.
